

Machine Remote Access – Network Requirements

Secure VPN Remote Support via StrideLinx Industrial Router

Our machines include a secure industrial VPN router to allow authorized remote diagnostics and support. The router establishes an outbound encrypted connection to the StrideLinx cloud service. No inbound firewall ports are required.

Category	Requirement / Description
Connection Type	Outbound connection initiated by machine VPN router
Protocol	HTTPS / TLS encrypted VPN tunnel
Port Required	TCP 443 (standard HTTPS)
Firewall Changes	None required (no inbound port forwarding)
Authentication	User login required through StrideLinx portal
Access Scope	Access limited to machine control network (PLC, HMI, drives)
Network Isolation	Machine devices placed on isolated internal subnet
Internet Requirement	Any standard internet connection with HTTPS access allowed

Security Features

- Outbound-only connection initiated by the router
- No inbound firewall rules required
- Encrypted VPN tunnel using TLS
- User authentication and access control
- Machine network separated from plant network
